

YOU CAN HELP WOMEN LEADERS BUILD THE FUTURE

Homeward Bound is an international community of remarkable women in STEMM (Science, Technology, Engineering, Math, and Medicine), all of whom are dedicated to growing their leadership through the fight against climate change.

I'm Dr. Tiffany Vora, and I'm a member of the sixth cohort of Homeward Bound (HB6), which consists of 100 women from 38 countries, ranging from senior political advisors to early career graduate students.

Beginning in Spring 2021, we gathered virtually for one year to broaden and deepen our leadership skills, to network, and to embrace a new model of leadership for the greater good—not just for people, but for our planet.

As we prepare for our voyage to Antarctica, we are looking for corporate sponsors who are like-minded in building a future that is sustainable, equitable, and resilient for generations to come.

You and your company can help make a difference too!

WHY ANTARCTICA? LEADERSHIP DEEP DIVE IN THE MOST FRAGILE PLACE ON EARTH

Today, the women of HB6 face a new challenge—and opportunity. We seek to complete our leadership program during an intensive three-week journey to Antarctica, a place on the leading edge of climate change that has hosted the capstone experience of each previous Homeward Bound cohort.

Our journey to this remote and extreme landscape enables an immersive experience where we can build our leadership, peer-coaching, problem-solving, and collaborative skills with guidance from our Homeward Bound program mentors, faculty, and alumni.

HOW YOU CAN HELP

Your financial sponsorship directly supports me in meeting my Antarctica voyage costs as well as my financial needs for gear, travel insurance, and flights.

While a monetary donation is the preferred means of funding, I also welcome donations of extreme-weather gear, airline tickets or miles, or travel insurance. Visibility to your networks is also greatly appreciated!

To discuss the sponsorship, please contact hello@tiffanyvora.com or reach out on LinkedIn: www.linkedin.com/in/tiffanyvora/

The women of Homeward Bound are the next generation of STEMM leaders in the fight against climate change. We're doing the research, testing the solutions, building the businesses, and informing the policy that will position humanity to turn the tide.

Our voyage has been scheduled for November 2023, with payments already having started. The overall cost of USD ~\$20,000 per woman is a key opportunity for sponsors who value sustainability, DEI, and building a better future to change the life of a future women STEMM leader.

YOUR CONTRIBUTION WILL HAVE GLOBAL IMPACT

#TeamHB6

This voyage is an important aspect of my international advocacy for the power of women and historically underrepresented innovators to solve the world's biggest challenges—including climate change. Over these 19+ days, I will foster connections with women on the leading edge of scientific disciplines from physics to chemistry to environmental science to biology. I will also continue to grow my own leadership practice, which focuses on 10x impact rooted in sustainable and ethical technology.

Your sponsorship supports social equity, diversity, and representative leadership, all crucial for effective change at all scales. As members of HB6, we will set the stage for improved gender equity in STEMM by further developing our leadership journey and building new collaborations for global sustainability.

You can learn more about the voyage's goals and impacts [here](#).
